
TCX2005: Information Systems, Management and Organisations

L1: Course Introduction

Prakash C. Sukhwal (Dr.)
Senior Lecturer, DISA
pcsdisa@nus.edu.sg

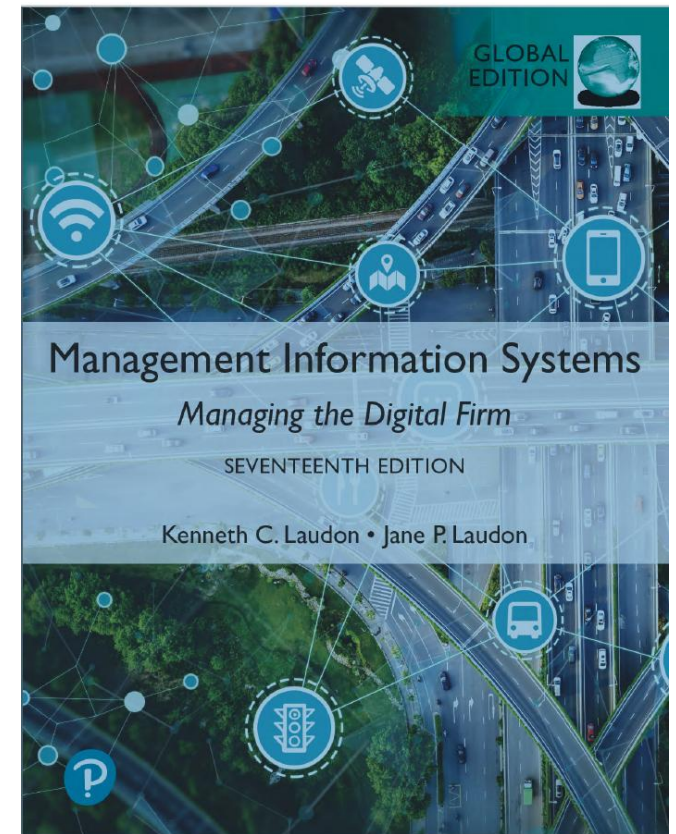

Time & Venues

- Lecture
 - Thursday, 6:45 – 8:45 PM
 - Venue: LT15 (if not zoom)
 - Recordings on Canvas
 - Tutorial (TA: Mr. Yutaro)
 - Starting next week (Week-2)
 - Thursday, 8:45 – 9:45 PM
 - Same as lecture theatre (or same zoom session)
 - Not recorded
 - **Final Exam**
 - Jul 11, 9:00 – 11:00 AM (Exemplify; No internet)
 - Venue: **TBD**
-

Learning Resources

- Textbook (recommended)
 - Management Information Systems- Managing the Digital Firm, 17th Ed.,
 - Authors: Laudon, K. C., Laudon, J.P.,
 - Publisher: Pearson
- Other Material
 - Weekly: Reading and Video links shared on Canvas

Assessment

Individual (70%)

- **Class Performance: 10%**
 - Tutorial: 7 points (1 point each; T2-T8)
 - Bonus: 3 points (*submit all Tutorials on time*)
- **Canvas weekly quiz 10%**
 - **Timed Quiz 1 to 6:** Material covered every 2 sessions [except L9, L10 has individual quizzes]
 - **Max 2 attempts/quiz; MUST be done by Canvas deadline (NOT available after deadline)**
- **Final Exam (open book): 50%**
 - In-person; Written; Computer-based (**Exemplify (No internet; FULL lock down)**)
 - Students are required to bring their own laptops to the exam venue
 - Format: MCQs + Short-answer Qs
 - Allowed material: hardcopy materials, books, lecture notes

Group (30%)

- **Team Project: 30%**
 - Proposal: 10% (1 submission per team)
 - Presentation: 20% (*10 mins + 5 mins QA*)

Forming Teams

- T1 in Week-1
- ~5 or 6 Students per team
 - **No individual project**
 - No changes permitted after week-3
- Self sign-up on Canvas:
 - Canvas → People → Project group

Timetable (May 14 – Jul 11, 2026)

Week	Pre-Recorded Lecture (Released every Monday morning)	F2F/Zoom Lecture (Thursday)	Tutorial	Milestones
1		L1: Course Introduction , Information Systems in Global Business Today-I [In-person]	T1: Project Briefing & Team Formation	Teams Ready (Register on Canvas before L3)
2	L2: Information Systems in Global Business Today-II [Pre-recorded]	L3: Information Systems, Organizations, and Strategy-I [In-person]	T2: tutorial (in-class)	
3	Project/Course Consultation (zoom link will be sent)	L4: Information Systems, Organizations, and Strategy-II [Pre-recorded] Project/Course Consultation (before tutorial)	T3: tutorial (zoom)	Project Proposal Due (Deadline: May 31 Sunday 23:59)
4	L5: Issues raised by Information Systems [Pre-recorded]	L6: Critical IS Infrastructure – I [Online Via Zoom]	T4: tutorial (zoom)	
5	L7: Critical IS Infrastructure – II [Pre-recorded]	Course and Project Consultation [Online Via Zoom]	T5: tutorial (zoom)	
6	L8: Securing Information Systems: Governance & Risk Management [Pre-recorded]	L9: Enhancing Decision Making [Online Via Zoom]	T6: tutorial (zoom)	Submit Presentation Slides (Deadline: Jun 21 Sunday 23:59)
7	L10: Building Information Systems [Pre-recorded]	Online Project Presentation (~3 hrs.)	T7: tutorial (take home)	
8	Course wrap-up and Consultation (zoom link will be sent)	Online Project Presentation (~3 hrs.)	T8: tutorial (take home)	
9	Final Exam (Jul 11, 2026) [Written; in-person]			Final Exam

F2F/Online Classes

Lectures

- L1 (F2F; Today)
- L3 (F2F; May 21)
- L4 (online; May 28 for consultation)
- L6 (online; Jun 4)
- L7 (online; Jun 11 for consultation)
- L9 (online; Jun 18)
- Online Project Presentation-I (Jun 25)
- Online Project Presentation-II (Jul 2)

Communication

- Canvas
 - Announcement, Files (lecture notes, reading materials, etc.)
- Email
 - Put “TCX2005” in the subject line
 - **DO NOT** email directly through Canvas Inbox
- **Important**
 - Check Canvas and your NUSNET email regularly for announcements and updates

Project Briefing

What is the Project about?

Goal & Deliverables

Submissions & Evaluations

Timelines

Theme: Digital Transformation at Work

- Digital Transformation is the integration of digital technology into all areas of a business or organization, fundamentally changing how you operate and deliver value.
 - It is not just about technology—it requires cultural change, process redesign, and new ways of thinking.
 - During TCX2005 we will cover aspects of digital transformation under:
 - IS in global business: L1/L2
 - The underlying strategy: L3/L4
 - Governance & Risk: L8
 - Decision Making & Infrastructure: L6/7/9
-

Theme: Digital Transformation at Work

Examples:

- **Operational Reporting:** Automate daily/weekly/monthly reporting from multiple inventory houses, production facilities, or regions using cloud dashboards or reporting tools. This reduces repetitive manual data entry and frees up hours of valuable time.
- **Leave Application Process:** Replace paper/email-based forms with an automated HR portal or chatbot.
- **Expense Claims:** Scan receipts into a system that auto-generates reports instead of Excel + email workflows.
- **Inventory Tracking:** A mobile app for checking stock levels rather than pen-and-paper logs.

These are small, common processes, which after automation, can save time, reduce errors, and free up staff for more meaningful work.

Project Overview

Goal: Identify a manual process in your workplace and redesign it using digital technologies.

Focus Areas

1. Understand current process (As-Is)
 2. Map user journey and pain points (from point 1)
 3. Propose a digitally transformed process (To-Be)
 4. Highlight impact, tech enablers, constraints & requirements
-

Project Timeline and Key Dates

Team formation via Canvas

Students self-register their team using the Canvas platform

Proposal due (submit on Canvas)

Team leader submits the proposal through Canvas

Submit slides (Sunday 23:59)

Presentation slides are due by Sunday midnight

Online (Zoom) Project Presentations (~3-4 hrs.)

Whole Team presents projects online
Duration: 10 minutes + 5 minutes Q&A (per team)

**1-2 members can do the 10 min presentation;
Others can do Q&A**

Team Formation

- 5-6 members per team
 - **No individual** projects allowed
 - Finalize teams by Week 2 on Canvas:
 - Go to Canvas → People → Project Group
 - No changes after Week 3
-

Suggested Workflow

- **Identify** a process relevant to your current or past workplace
 - **Map** the As-Is process using swimlanes or flowcharts
 - **Capture** the user journey and **key** stakeholders
 - **Design** To-Be process powered by digital tools (AI, apps, other IS systems, etc.)
 - **Specify** constraints & requirements (budget, tech, change mgmt.)
 - **Comment** on possible impact of the proposed solution
-

Assessment Breakdown

- Proposal 10 %
 - One submission per team on Canvas
 - Format: 2-slides (cover and references not counted)
 - Due: Week 3 (See timetable)
 - Presentation 20 %
 - 10 mins + 5 mins Q&A per team
 - Format: Up to 8 Slides (cover and references not counted)
 - Conducted in Week 7 or 8 (Online)
-

Example: 2-Slide Proposal Template

Title of the Project

Team Members

S1

Brief Description of
Current Process

Key Stakeholders / Users

S2

Motivation for Digital
Transformation

Initial Ideas for To-Be Process

Anticipated Tech / Tools

Digital Transformation Proposal Overview

Project Title & Team Members

Introduction of project and
key personnel

Motivation for Transformation

Reasons driving the change

Initial To-Be Process Ideas

Preliminary concepts for new
processes

Current Process Description

Overview of existing
procedures

Key Stakeholders/Users

Identification of main
participants

Anticipated Tech/Tools

Expected technologies and
tools

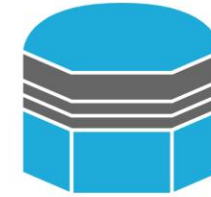

Final Presentation Guidelines

Project Evaluation Breakdown

- **Duration:** 10 minutes + 5 minutes Q&A
- **Format:** Online via Zoom
- **Required:** Visuals (process diagrams, flowcharts, etc.)
- **MUST Submit Slides by:**
Week 6 Sunday midnight

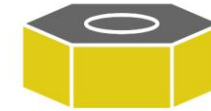

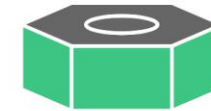

Problem Understanding & As-Is Analysis

Clear explanation and visualization of current processes

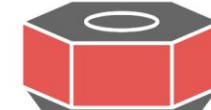

To-Be Process Design

Creativity and feasibility of redesigned processes

Constraints, Requirements & Change Management

Recognition of limitations and management

Stakeholder & User Journey Mapping

Identification of key users and their needs

Value Addition & Impact

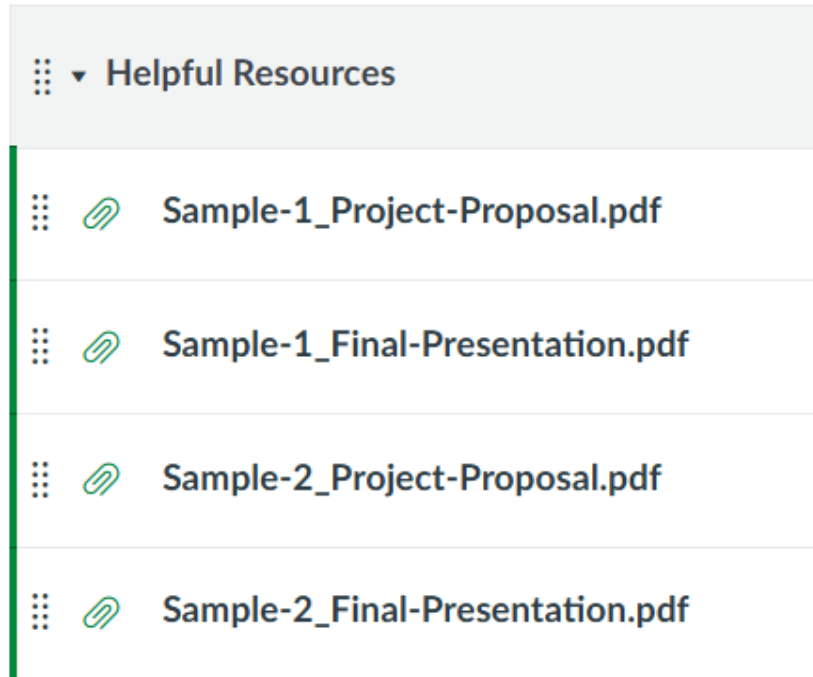

Savings in time and reduction of errors

Presentation Quality & Teamwork

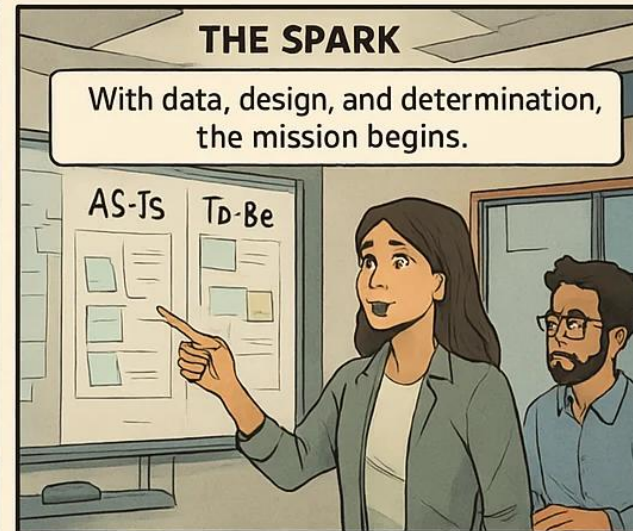

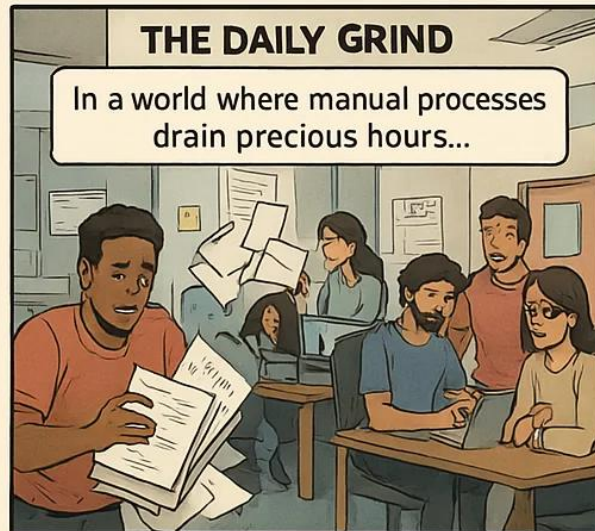

Clarity and engagement in delivery

Support and Resources

- Project-related consultations via Zoom (see timetable)
 - Use GenAI responsibly (e.g., visual aids, documentation support)
 - Always declare the usage at the end of slides.
-

TRANSFORMERS OF TOMORROW: FROM CHAOS to CLARITY

Have fun while you transform!!

More Examples

Problem Context

Organizational Baseline

Organization: Company S
(Major Enterprise)

Process: Corporate Financial
Expense Processing

Scale: Average 1,450 cases per
month

Start Boundary: Employee incurs
expense & submits proof.

End Boundary: Approved data
registered in Financial ERP (SAP)
& employee reimbursed.

Key Stakeholders

**Card Users
(Employees)**

Submit
physical/digital
evidence.

**Department
Managers
(Approvers)**

First-line business
justification.

**Finance
Reviewers**

Final verification
against
compliance rules.

**IT
Administrators**

Maintain legacy
financial ERP.

Current Inefficiency Drivers

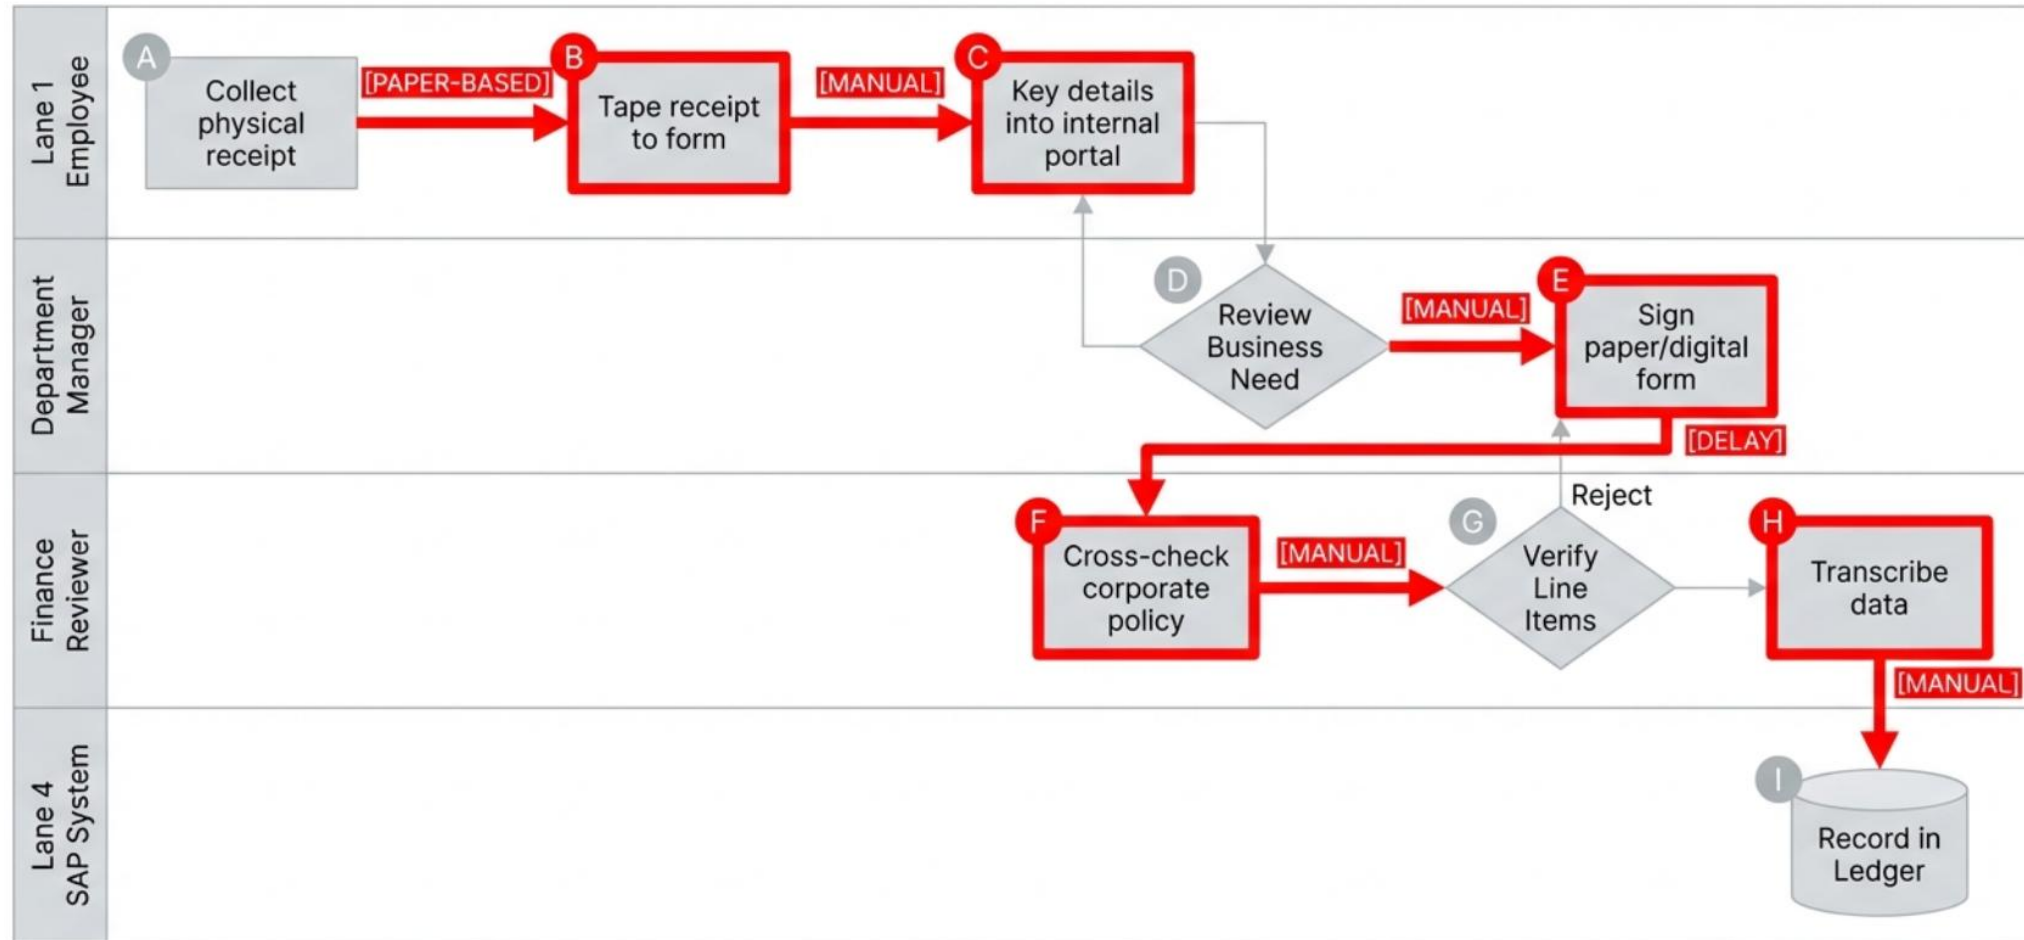

Process relies strictly on:

- Physical/paper receipts
- Manual ERP data entry
- Human verification of complex corporate compliance rules

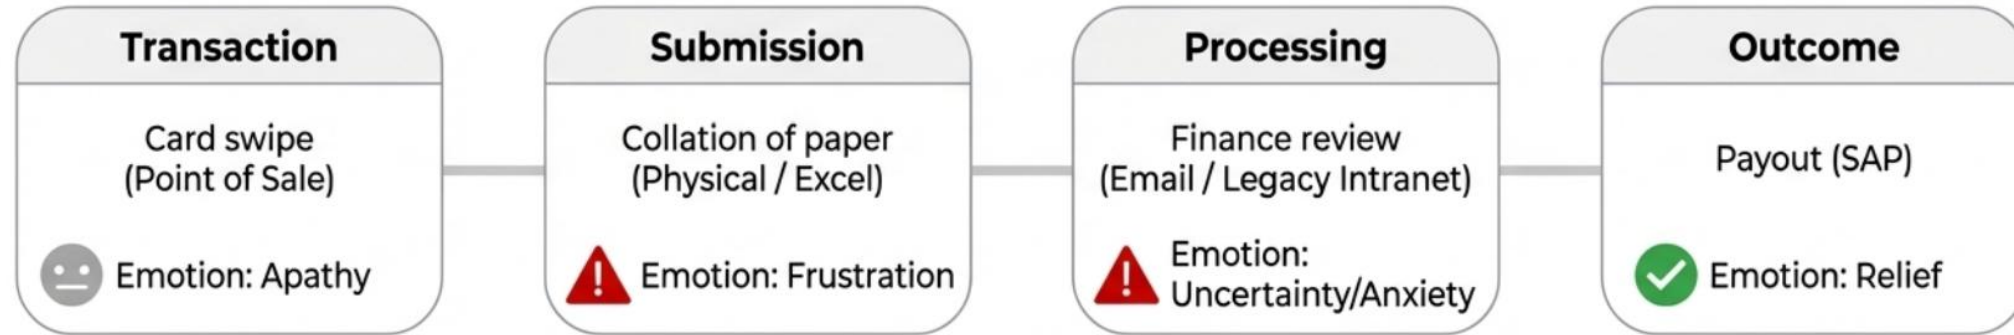

Resulting Pathology:

- High error rates (typos, omissions, policy violations)
- Severe processing bottlenecks (averaging 24+ hours per batch)
- Massive resource drain on the finance team for rule-based verification

AS-IS Process Flow

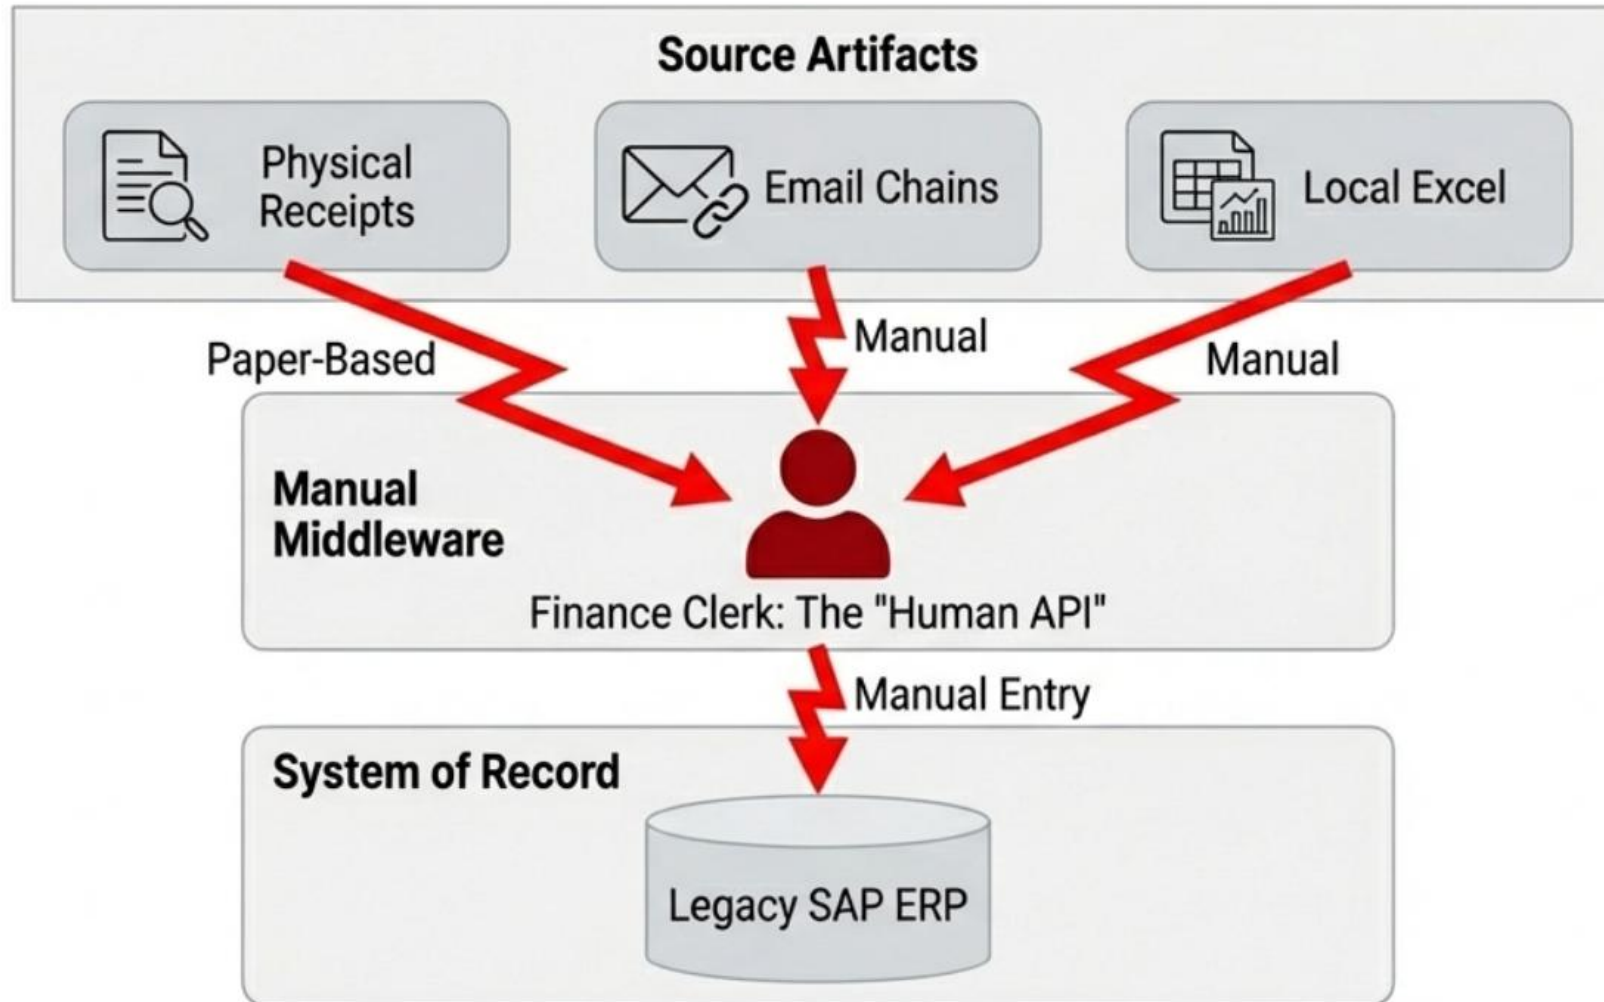

AS-IS User Journey & Pain Points

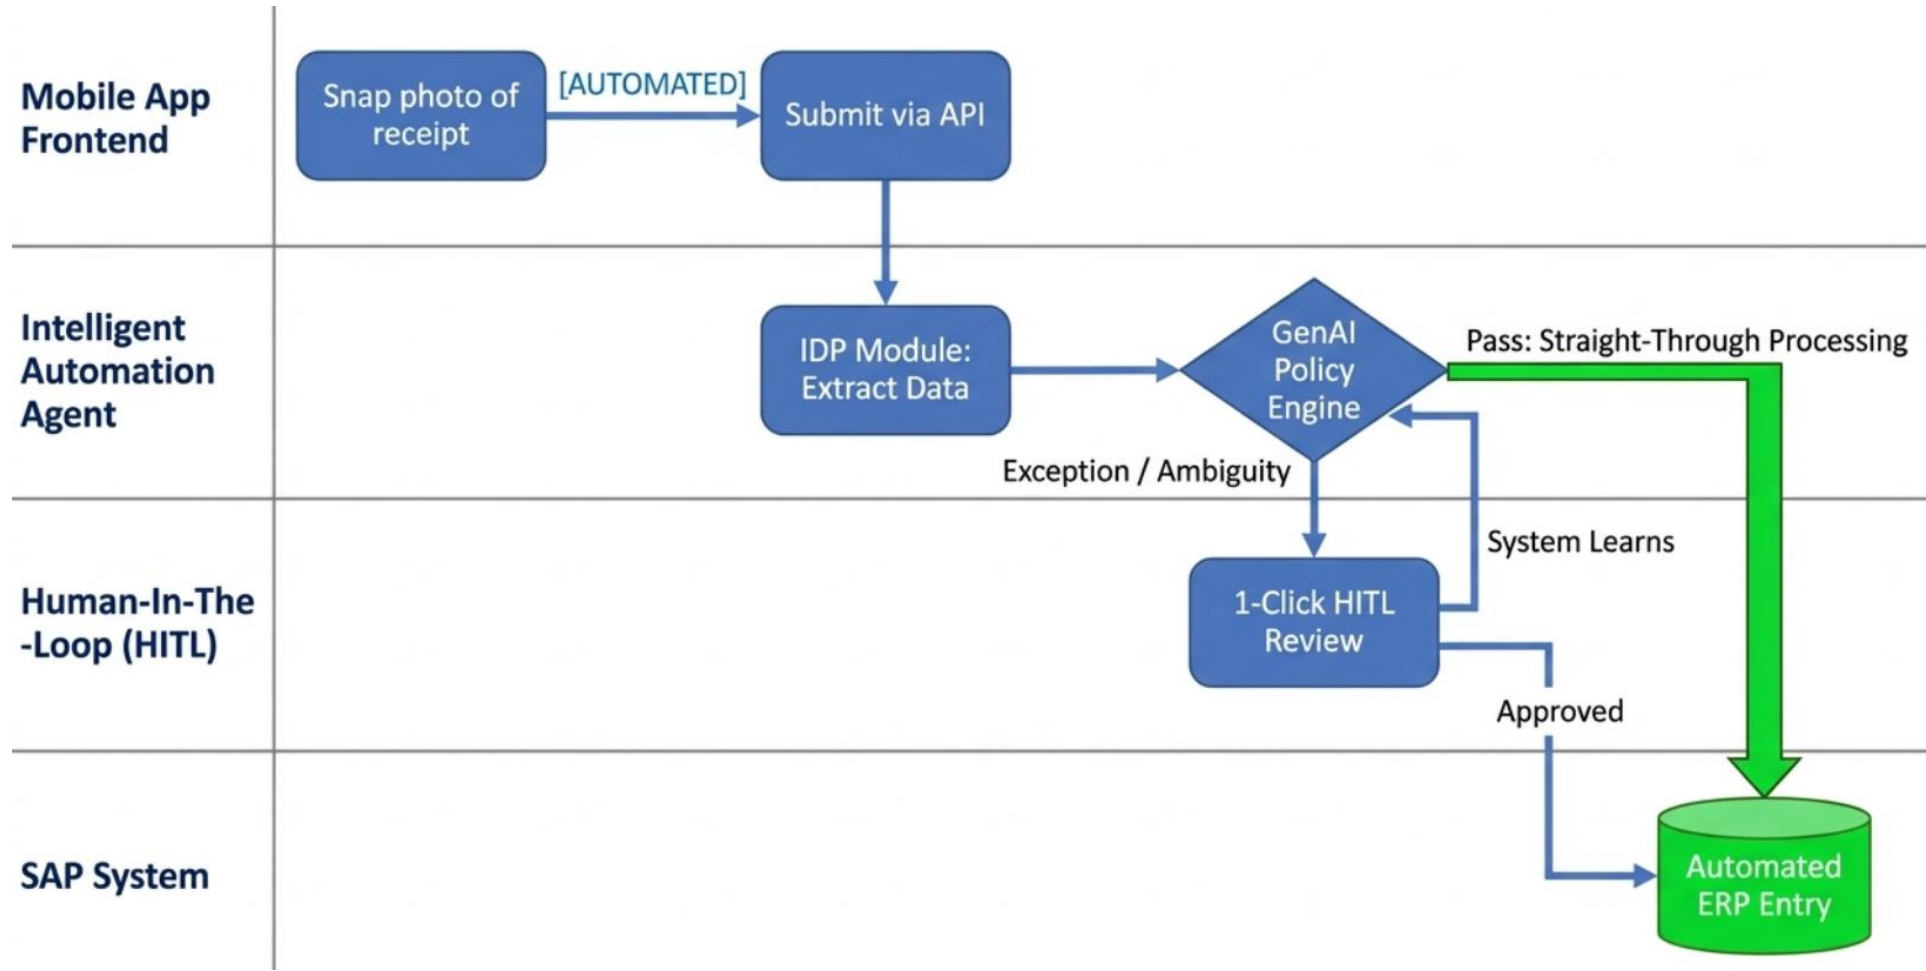

Process Step	Pain Point	Severity	Frequency
Receipt Submission	Lost physical receipts; manual scanning and taping to forms.	H	H
Policy Check	Finance manually checks compliance rules per line item against complex corporate policy documents.	H	H
Exception Handling	End-to-end delays caused by looping email chains for missing information.	H	M
ERP Data Entry	Typos, omissions, and manual keying errors causing reconciliation failures.	M	H

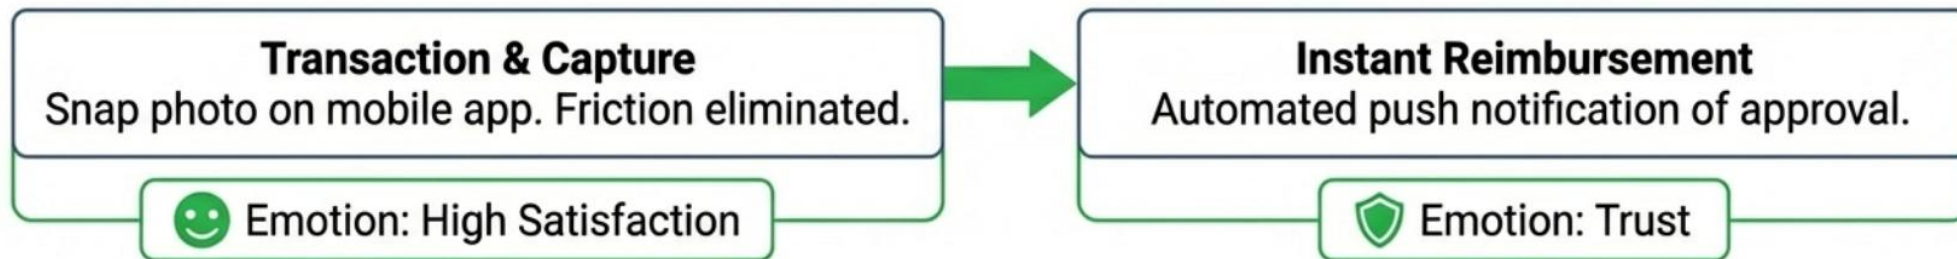

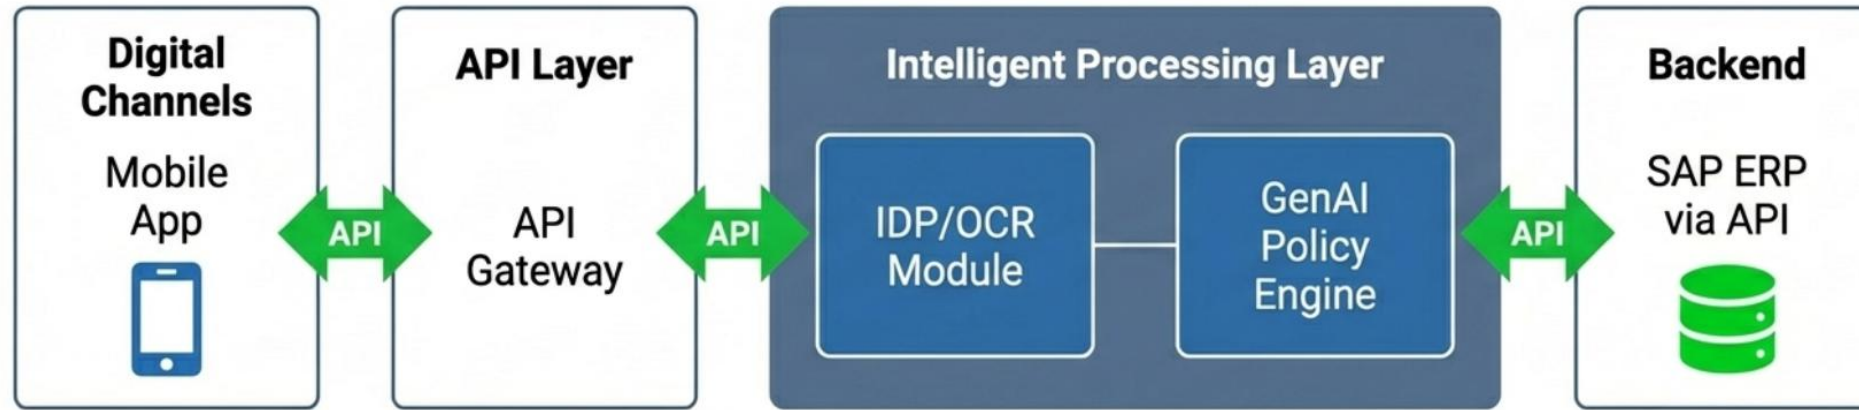

AS-IS System Architecture

TO-BE Process Flow

TO-BE System Architecture & Planned User Journey

Clear Traceability

Pain Point	Capability Gap	TO-BE Solution	Measurable KPI Impact
Manual transcription of physical paper	Unstructured data ingestion	IDP/OCR extraction module	Data entry time reduced to 0 seconds .
Slow, manual corporate compliance checks	Automated decision engine	Generative AI Policy Engine	Verification time reduced from minutes to <2 seconds per receipt.
Reimbursement status is a black box	Real-time tracking architecture	Mobile Frontend & API Gateway	Cycle times cut from weeks to days .
Errors and typos in SAP ledger entry	System integration (STP)	Automation Orchestrator / API	99.9% error reduction in financial system-of-record.
